

Ergebnisse Dynamischer Bitvektor und Balanced Parentheses

Projekt - Fortgeschrittene Datenstrukturen

Manuel Haag | 25. Juli 2022

Implementierung

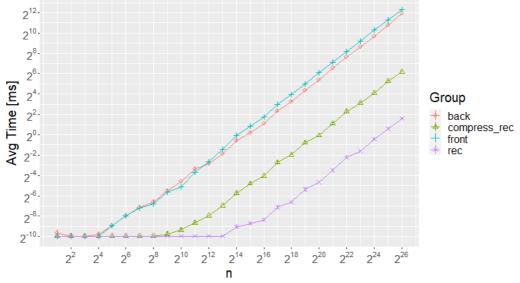

Code

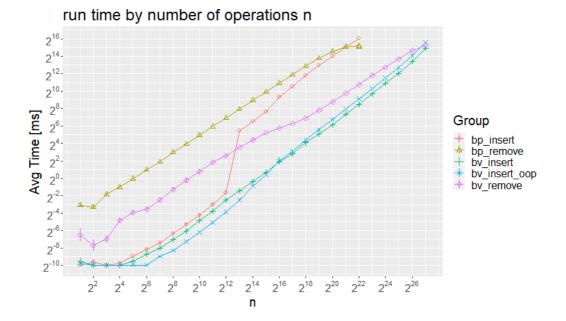

- Codezeilen: 4118 (src), 1247 (test)
- C++20

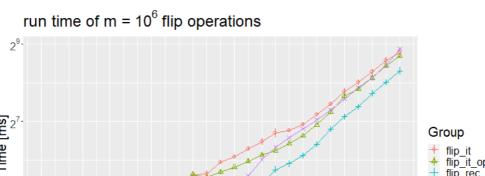

Besonderheiten

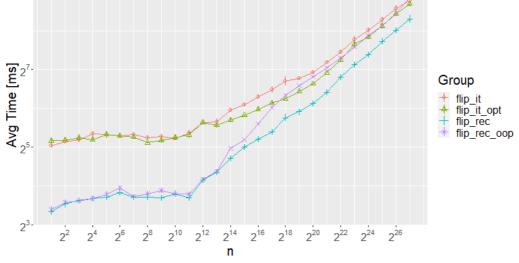

- AVL-Tree mit statischen Blättern
- naives Balancieren
- Fallunterscheidung für Knoten im Baum
- iterativ

construction time, 64 leaf blocks

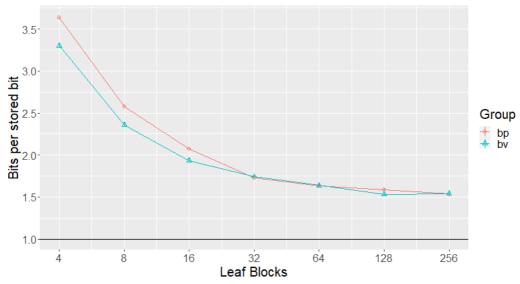

space usage by leaf sizes, $n = 2^{18}$

Lektion gelernt?

Takeaway

- Baseline Implementierung + viele Teste sind hilfreich
- "premature optimization is the root of all evil"
- Benchmarken!
